

IN THE SPECIFICATION:

Page 8, lines 1-14:

The side brackets 12, 14, 15 each have a lengthwise vertical slot 41 located in the middle portion of long bracket face 42. As shown, card guide bracket 50 includes horizontal portion 54 and vertical portion 56. Card guide bracket 50 may be secured at its lengthwise ends to opposing side brackets 12, 112. For example, at each end of card guide bracket 50 a thumbscrew 43 has a threaded member that passes through round washer 44 and square washer 45 via square washer slot 48. The thumbscrew 43 threaded member then passes through vertical portion 52 of card guide bracket 50 and is threaded into a t-slot nut 49 inserted into a rectangular hole in vertical portion 52 of card guide bracket 50. T-slot nut 49 may also extend laterally into square washer 48. When thumbscrews 43 at each end of card guide bracket 50 are loose, the user may move card guide bracket 50 to a desired vertical position and then tighten thumbscrews 43 to fix the card guide bracket 50 at such location. Various structures may be used for securing a card guide bracket 50 at an upper position including a wedge nut, a releasing clip, and others.
